- A multiple-input multiple-output (MIMO) wireless communications system comprising:
 - (i) a plurality of transmit antenna elements; and
 - (ii) a plurality of receive antenna elements;

wherein the transmit antenna elements are arranged to provide polarisation diversity and wherein the positions of the transmit antenna elements are arranged, such that spatial diversity is avoided.

- 2. A MIMO wireless communications system as claimed in claim 1 wherein each of said transmit antenna elements is polarised at one of two first substantially orthogonal polarisations.
 - 3. A MIMO wireless communications system as claimed in claim 2 wherein each of said receive antenna elements is polarised at one of two second substantially orthogonal polarisations.
 - 4. A MIMO wireless communications system as claimed in claim 3 wherein said two first substantially orthogonal polarisations are different from said two second substantially orthogonal polarisations.
- 5. A MIMO wireless communications system as claimed in claim 1 wherein said plurality of transmit antenna elements comprises one or more dual-polar-elements each such dual-polar-element being two co-located antenna elements operable from a single antenna aperture.
- 25 6. A MIMO wireless communications system as claimed in claim 1 wherein said plurality of transmit antenna elements is provided by an antenna array.
 - 7. A MIMO wireless communications system as claimed in claim 1 which is arranged to operate at a particular wavelength and wherein the inter-element spacing of the transmit antenna elements is less than one of the particular wavelength.

- 8. A MIMO wireless communications system as claimed in claim 1 which is arranged to provide non-MIMO communications in addition to MIMO communications.
- A MIMO wireless communications system as claimed in claim 1
 wherein said transmit antenna elements are together arranged to
 provide a plurality of antenna beams in use.
- 10. A MIMO wireless communications system as claimed in claim 9 wherein said plurality of antenna beams are provided using one or more beamformers integral with the transmit antenna elements.
- 11. A MIMO wireless communications system as claimed in claim 9 wherein said plurality of antenna beams comprises pairs of antenna beams, each pair comprising a first antenna beam of a first polarisation and a second antenna beam, substantially identical to the first but provided at a second polarisation different from the first polarisation.
 - 12. A MIMO wireless communications system as claimed in claim 11 wherein each of said pairs of antenna beams is arranged to provide a two-branch MIMO input.
 - 13. A MIMO wireless communications system as claimed in claim 1 which is selected from a 2:2 and a 2:4 MIMO system.
 - 14. A MIMO wireless communications system as claimed in claim 1 which is selected from a fixed wireless access system, a personal area network, a wireless local area network, and a mobile communications network.
- 25 15. A MIMO wireless communications system as claimed in claim 1 wherein each of said transmit antenna elements comprises a column of antenna elements.
 - 16. A multiple-input multiple-output wireless communications method comprising the steps of:-
 - (i) transmitting a space-time coded signal from a transmit antenna arrangement comprising a plurality of transmit

antenna elements arranged such that polarisation diversity is provided and spatial diversity is avoided; and

- (ii) receiving the space-time coded signal at a receive antenna arrangement comprising a plurality of receive antenna elements.
- 17. A method as claimed in claim 16 which further comprises:
 - (i) positioning the transmit antenna arrangement and the receive antenna arrangement such that a line of sight path is present between those two arrangements; and
 - (ii) using said transmit antenna arangement to transmit the space-time coded signal to the receive antenna arrangement at least partly along said line of sight path.
- 18. A method as claimed in claim 16 which further comprises transmitting a non-space-time coded signal from the transmit antenna arrangement simultaneously with the space-time coded signal.
- 19. An antenna arrangement for use in a multiple-input multiple-output (MIMO) wireless communications system, said antenna arrangement comprising a plurality of transmit antenna elements arranged to provide polarisation diversity and wherein the positions of said transmit antenna elements are such that spatial diversity is avoided.
- 20. An antenna arrangement as claimed in claim 19 which is arranged to operate at a particular wavelength and wherein the inter-element spacing of the transmit antenna elements is less than one of the particular wavelength.
- 21. An antenna arrangement as claimed in claim 19 which is also suitable for use in a non-MIMO communications system simultaneously with use in the MIMO communications system.

22. A method of operating an antenna arrangement as claimed in claim
19 which comprises transmitting space-time coded signals from said antenna arrangement.
